

AI and Personalized Health

**15:00-17:00 pm, January 22st, 2024
St. Johann Church
Berglistutz 3, 7270 Davos, Switzerland**

Healthcare stands at the cusp of transformation, driven by advancements in artificial intelligence and personalized health technology. Shifting from a reactive to a proactive model, we can leverage predictive analytics, wearable devices, and seamless data-sharing to enable early intervention and tailored care.

The COVID-19 pandemic revealed the urgent need for preemptive healthcare strategies, highlighting gaps in global coordination and response. Empowering individuals through participatory models, fostering private-sector collaboration, and adopting privacy-preserving technologies can unlock innovation while safeguarding personal data.

This roundtable and panel brings together experts to explore how AI-driven solutions can redefine healthcare delivery, paving the way for better outcomes for individuals and societies.

Agenda

15:00 - 16:00: Private expert round table discussion
16:00 - 16:10: Transition to public panel
16:15 - 16:45: Public panel summarizing the round table
16:45 - 17:00: Public Q&A

This event is part of the Leading Beyond Boundaries initiative that seeks to provide an opportunity for deep and impactful conversations among scientific, business, and policy leaders during the World Economic Forum. Leading Beyond Boundaries will record the expert round table to form a basis for a public report highlighting the most important insights (under Chatham House Rules).

Leading Beyond Boundaries is grateful to partner with MIT Connection Science, the Harvard Center on the Legal Profession, Stanford HAI, and Wisdom House to make this event possible.
